

AWS DEVOPS & SECURITY, BUILT AS CODE

Secure, well-controlled AWS, built as code by senior engineers.

A boutique AWS consultancy for UK and EU software teams. You work directly with certified senior engineers, no offshore and no account-manager layer.

```
# how we work, declared once and version-controlled
Type: MysteriousCode::Cloud::Engagement
Properties:
  Model: boutique, senior-led
  Delivery: infrastructure-as-code
  Focus: [ devops, security, cost-control ]
```

WHAT WE DO

Production-grade infrastructure

We design, build and run your AWS environment: secure by default, reliable, ready for production traffic.

Everything as code

Version-controlled and reviewed with AWS CloudFormation. No configuration drift, no snowflake servers, no surprise bills.

Security woven in

Guardrails, least-privilege access and continuous posture management, led by an AWS Certified Security engineer.

SERVICES

devops	DevOps & infrastructure as code Pipelines and environments, rebuildable from code.	security	Security reviews & posture Security Hub, GuardDuty and WAF, all AWS-native.
ongoing	Ongoing AWS management Monitoring, patching and cost control, monthly.	cloud-native	Cloud-native & re-platforming Containers, serverless and managed databases.
cost	Cost optimisation Spend made visible and controlled, AWS-native tooling.	snapshot	Production-Readiness Snapshot An in-account review: prioritised fixes with effort and cost.

WHY MYSTERIOUS CODE

+ 100% AWS-certified

Solutions Architect & DevOps Engineer Professional, Security Specialty.

+ Genuinely boutique

Senior engineers do the work. No offshore, no PM layer.

+ UK & EU based

In your timezone, with over a decade on AWS.

+ Woman-owned

Founder-led and independent, you deal directly with the principal.

"You deal with the senior engineers who do the work, not an account manager. They got our AWS environment production-ready and keep it that way."

Jarret Hardie, Chief Technology Officer, Sovo Assessment

Trusted by software companies across the UK and EU: around **70%** faster deployments for **Sovo Assessment**, **4x the traffic** at the same cost for **Integriser** after moving off Google Cloud, and the AWS backend behind **Fitedo**, built and run by us. When a recent architecture review uncovered a live breach, **the critical exposures were closed the same day** (**anonymised summary, PDF**).

Start with a **second opinion**

A free, no-obligation second opinion from a senior architect: 30 minutes on where your AWS setup is most exposed, before you launch or as you grow. No account access needed, and you keep a short written read either way.
